

Forward-Looking Statements

Cautionary Note Regarding Forward-Looking Statements (Safe Harbor Statement):

This Presentation contains "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Such statements include, but are not limited to, any statements relating to: our plans and strategies for our business; projections of future financial or operational performance; the timing and outcome of pending or anticipated applications for regulatory approvals; factors that may affect the dairy and beef industries and future demand for our products; the extent, nature and duration of the COVID-19 pandemic and its consequences, and their direct and indirect impacts on the Company's production activities, operating results and financial condition and on the customers and markets the Company serves; the scope and timing of ongoing and future product development work and commercialization of our products; future costs of product development efforts; the estimated prevalence rate of subclinical mastitis and producers' level of interest in treating subclinical mastitis given the current economic and market conditions; the expected efficacy of new products; estimates about the market size for our products; future market share of and revenue generated by current products and products still in development; our ability to increase production output and reduce costs of goods sold associated with our new product, Tri-Shield First Defense*; the future adequacy of our own manufacturing facilities or those of third parties with which we have contractual relationships to meet demand for our products on a timely basis; the anticipated costs of (or time to complete) planned expansions of our manufacturing facilities and the adequacy of our funds available for these projects; the continuing availability to us on reasonable terms of thirdparty providers of critical products or services; the robustness of our manufacturing processes and related technical issues; estimates about our production capacity, efficiency and yield; the future adequacy of our working capital and the availability and cost of third-party financing; future regulatory requirements relating to our products; future expense ratios and margins; future compliance with bank debt covenants; costs associated with sustaining compliance with current Good Manufacturing Practice (cGMP) regulations in our current operations and attaining such compliance for the facility to produce the Nisin Drug Substance; implementation of international trade tariffs that could reduce the export of dairy products, which could in turn weaken the price received by our customers for their products; our effectiveness in competing against competitors within both our existing and our anticipated product markets; the cost-effectiveness of additional sales and marketing expenditures and resources; anticipated changes in our manufacturing capabilities and efficiencies; the value of our net deferred tax assets; projections about depreciation expense and its impact on income for book and tax return purposes; anticipated market conditions; and any other statements that are not historical facts. Forward-looking statements can be identified by the use of words such as "expects", "may", "anticipates", "aims", "intends", "would", "could", "should", "will", "plans", "believes", "estimates", "targets", "projects", "forecasts", "seeks" and similar words and expressions. In addition, there can be no assurance that future developments affecting us will be those that we anticipate. Such statements involve risks and uncertainties, including, but not limited to, those risks and uncertainties relating to difficulties or delays in development, testing, regulatory approval, production and marketing of our products (including the First Defense® product line and Re-Tain™), competition within our anticipated product markets, customer acceptance of our new and existing products, product performance, alignment between our manufacturing resources and product demand, our reliance upon third parties for financial support, products and services, changes in laws and regulations, decision making and delays by regulatory authorities, currency values and fluctuations and other risks detailed from time to time in filings we make with the SEC, including our Quarterly Reports on Form 10-Q, our Annual Reports on Form 10-K and our Current Reports on Form 8-K. Such statements involve risks and uncertainties and are based on our current expectations, but actual results may differ materially due to various factors

Table of Contents

3)	Financial Review ^{(1).}	30-36
4)	Other Information	.37-51

Section #1: Company Overview and Strategic Opportunity

- ImmuCell Corporation (Nasdaq: ICCC) is an animal health company focused on:
 - Delivering Immediate Immunity™ to newborn dairy and beef calves to improve herd productivity, while avoiding unnecessary dam vaccine injections, via the Company's leading-edge First Defense® product line.
 - Addressing the \$2 BILLION of annual economic harm to the dairy industry due to mastitis infections WITHOUT traditional antibiotics used in human medicine thereby reducing the amount of antibiotics in the human food chain, with Re-Tain™ (in late stages of FDA approval process).
 - Capitalizing on the significant growth in sales of the First Defense® product line (for dairy and beef calves) and revolutionizing the subclinical mastitis treatment paradigm with Re-Tain™, our novel purified Nisin product (for dairy cows).

What Role Does ImmuCell Play?

- Focus on solving the two most frustrating problems for dairy systems – scours and mastitis – in a way that reduces dependence on antibiotics.
- Improve the food chain with less antibiotics⁽¹⁾.
- Cows are more productive if we reduce the use of certain non-essential vaccines.
- The demand for animal protein, that must be produced efficiently while ensuring food quality and safety, increases as the human population grows⁽²⁾.
- Developing new international dairy and beef market opportunities and exploring small ruminant (goats and sheep)
 - (1) See Slide #45 for some relevant regulatory initiatives.
 - (2) The United Nations predicts that we will need to double food production to feed 10 billion people in the year 2050.

Coming Soon: Re-Tain™

Our **Product Lines**

First Defense®

Dual-Force®

Our First Defense® product line with *E. coli* and coronavirus claims

- **U.S. market opportunity:** About \$18 million in annual sales of calf-level products to prevent scours (diarrhea) in newborn dairy and beef calves
- USDA approved in bolus format since 1991
- USDA approved in gel tube format since 4Q 2018

Tri-Shield®

Our First Defense® product line with *E. coli*, coronavirus <u>AND</u> rotavirus claims

- **Beyond Vaccination**®: With this unique breadth of claims, we compete more effectively at the calf-level and also compete against vaccines given to cows to improve the quality of the colostrum that they produce for newborns.
- U.S. market opportunity: We estimate that annual sales of dam-level vaccine products used to prevent scours (diarrhea) are about 2X the calf-level product sales.
- USDA approved since 4Q 2017

Investing approximately \$3.5 million to increase production capacity (annual sales value) for the **First Defense**® product line from approximately \$18 million to approximately \$27 million during 2020 (see photos on next slide)

Re-Tain™

(Subject to FDA review and approval)

Our purified Nisin treatment for subclinical mastitis in lactating cows with zero milk discard

- Market opportunity: Mastitis is estimated to cause approximately \$2 billion in economic loss to the dairy industry each year⁽¹⁾
- Construction of \$21 million pharmaceutical production facility is complete
- First phased submission of manufacturing Technical Section has been reviewed by FDA
- Second phased submission expected during 4Q 2020
- Target for FDA approval and market launch (assuming first time approval of second phased submission): 2021

Investing approximately \$4 million to replace a CMO and bring formulation and aseptic filling services in-house during 2022

Expansion of First Defense® production capacity

Three Most Critical Action Items

1

Significantly grow sales of the First Defense® product line

2

Achieve FDA approval of **Re-Tain™**

3

Prove market
acceptance of **Re- Tain™** with current
\$10 million worth of
annual production
capacity

What do Producers do to Prevent Scours?

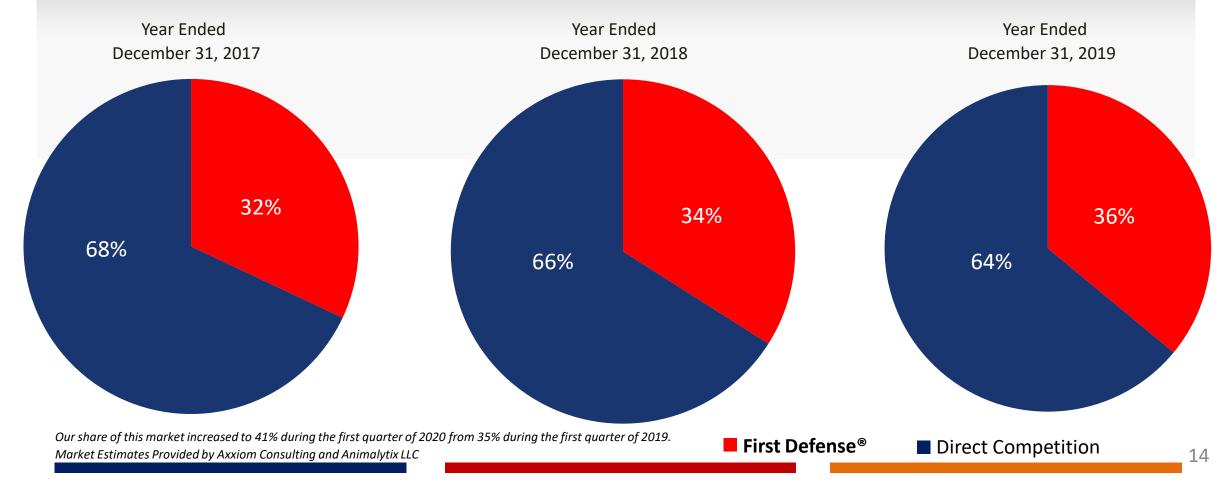

Nothing Vaccinate the mother cow Treat the calf **Action: Estimated** \$0(1) ~\$36 million ~\$18 million **Product** Sales: **ScourGuard by Zoetis Product** See slide # 14 N/A **Guardian by Merck Options: Scour Bos by Elanco** MERCK zoetis ELANCO

Calf-Level Competitive Product Comparison

Product	Mode-of Action	E. coli	USDA Claim Corona	s Rota
The First Defense® product line (ImmuCell)	Two-part: delivers bovine antibodies to the gut that <u>are</u> absorbed into the bloodstream	√	\checkmark	√
Calf-Guard® (Zoetis)	Forces calf to mount an immune response to a modified-live virus oral vaccine to develop protective antibodies, delayed response, inactivated by feeding of colostrum		√	√
BOVILIS® Coronavirus (Merck)	Forces calf to mount an immune response to a modified-live virus intranasal vaccine to develop protective antibodies, delayed response		√	
Bovine Ecolizer® (Elanco)	This product is exiting the market	√		

Calf-Level U.S. Market Share (in volume)

Long-term growth is expected due to the expansion of our sales & marketing team and the addition of a rotavirus claim to the **First Defense**® product line

Waste Less, Get More

DAM-LEVEL SCOUR VACCINE

LIVEBORN VALUED CALVES

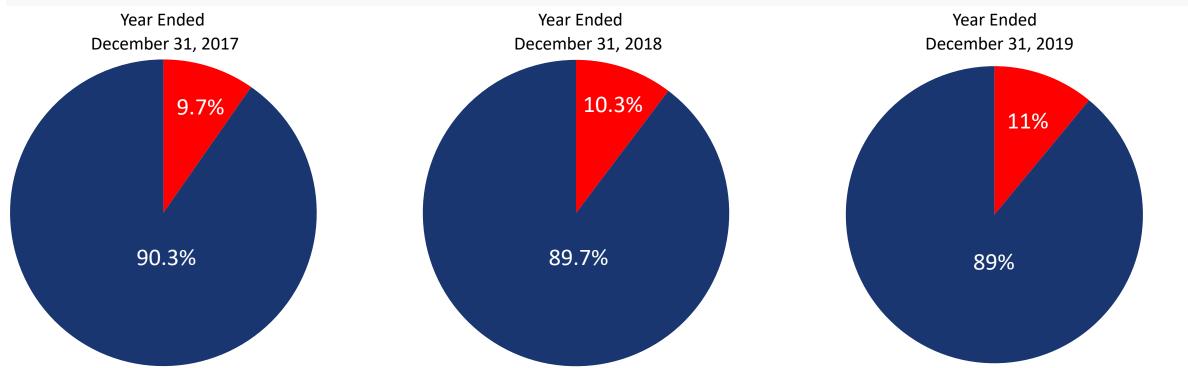

Calf-Level and Dam-Level U.S. Market Share (in volume)(1)

Huge market opportunity as we go Beyond Vaccination® and compete more effectively against vaccines that are given to mother cows

Join the revolution BEKOND

VACCINATION®

⁽¹⁾These unit volume figures account for the approximate number of calves and cows treated, even though two doses of the dam-level scour vaccines are required for first-calf heifers.

Sales Strategy to Increase Market Share in a Growing Market

- We now support our distributors with five regional sales managers and one director of marketing, reporting to our vice president of sales and marketing (with two open positions that may be filled by independent contractors).
- Expanded sales force communicating the valueproposition of the First Defense® product line directly to end-users while multiplying their efforts through distribution partners.
- Growth is being generated in multiple market segments: beef, calf ranch, dairy, vet clinics and fleet stores.
- We are initiating a process to achieve regulatory approvals for First Defense® in selected international territories.

Be a Calf Hero. Go Bernarion[®]

Mastitis: Leading Cause of Economic Harm to the Dairy Industry

\$2 Billion⁽¹⁾

- Mastitis is a potentially fatal mammary gland infection
 - \$2 billion per year in the U.S. alone
 - The single largest economic harm to the dairy industry⁽²⁾
- Traditional antibiotic treatments are available on the market, but milk from treated cows must be discarded
- Re-Tain™, our Nisin-based treatment for subclinical mastitis, does
 not require a milk discard or meat withhold because our bacteriocin
 is not a traditional antibiotic and is not used in human medicine

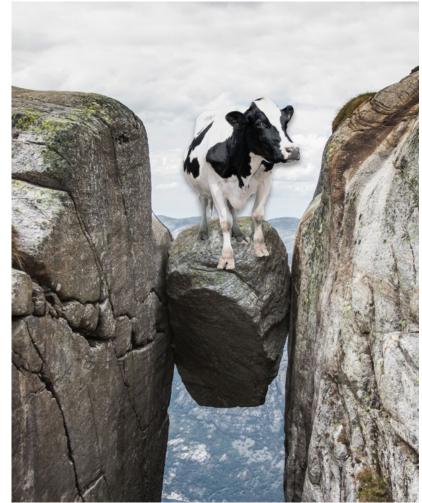

Why Treat Subclinical Mastitis?

- A cow infected with subclinical mastitis is "stuck between a rock and a hard place" because the dairy farmer KNOWS she is sick but cannot JUSTIFY the cost of "dumped" milk required to treat her.
- Subclinical mastitis is a chronic infection that should not be ignored.
- USDA estimates that 21% of all dairy cows are treated with a mastitis drug.
- USDA estimates that 51% of all dairy cows are treated with third generation cephalosporins (traditional antibiotics).

Stage of Mastitis	Incidence Rate	Annual Cost of Treatment Drugs	
Clinical	20-25% per year ⁽¹⁾	\$50-\$60 million ⁽²⁾	
Subclinical	20-25% at any given time ⁽¹⁾	۶۶٬۶ ⁽³⁾	

⁽¹⁾See Slide #45 for applicable sources.

⁽²⁾In lactating cows (excluding dry cow treatments of similar size)

⁽³⁾ImmuCell aims to revolutionize mastitis treatment practices by enlarging the market for the treatment of subclinical infections. With zero milk discard and zero meat withhold claims, our product candidate could make this economically feasible.

Re-TainTM: Novel Alternative to Traditional Antibiotics

Novel Alternative

- "Game changer": could make treatment of subclinical mastitis (infected, but still producing saleable milk) economically feasible
- The FDA has warned that the overuse of antibiotics that are considered critically important in human medicine may pose a "high public health risk"
- The concern is that widespread use of these drugs could encourage the growth of antibiotic-resistant bacteria ("superbugs")
- Nisin is not used in human medicine
- Bacteriocin Mode-of-Action: Kills cell by drilling a hole in the colonizing bacterium's cell wall
- Antibiotic Mode-of-Action: Inhibits growth of bacteria by preventing cells from dividing/multiplying

Value Proposition

- Zero milk discard and zero meat withhold (in the U.S.)
- Higher quality of milk by having lower somatic cell counts resulting in:
 - Increased milk premiums to the producer
 - Longer shelf life for fluid milk
 - Better taste for cheese
- Higher milk production outputs⁽¹⁾
- Improved reproduction efficiencies
- Reduction of clinical flare-ups from subclinical disease
- Reduction in pathogen load on the farm
- Healthier cows; reduction in culling

(1)Advanced Animal Diagnostics estimates that subclinical mastitis is responsible for more than 1,500 pounds (about \$240 @ \$16.00 per hundred weight) of lost milk production per infected cow.

Review of Competitive Product Claims

	Active			Effective Against				Label Claims	
Brand (Mfg)	Brand (Mfg) Ingredient	Strep. agal.	Staph. aureus	Strep. dysgal.	Strep. uberis	CNS	E. coli	Subclinical	<u>Clinical</u>

⁽¹⁾ Our intent is to seek these claims sometime after first FDA approval.

Cost of "Dumped" Milk Associated with Traditional Antibiotics Used to Treat Subclinical Mastitis

Range in costs per cow associated with milk discard for products with subclinical mastitis disease claims

Brand Name	Company	Treatment Days ⁽¹⁾	Discard Days ⁽¹⁾	Total Dump Days	Average Cost of Dumped Milk ⁽²⁾
Re-Tain™	ImmuCell	0	0	0	\$0
Amoxi-Mast	Merck	1.5	2.5	4	\$45
Pirsue	Zoetis	8	1.5	9.5	\$108
Spectramast-LC	Zoetis	2-8	3	5-11	\$57-\$125

⁽¹⁾ Treatment and discard claims from product labels

⁽²⁾ Averages are based on 70 lbs/day (low producing cows at 60 lbs/day and high producing cows at 80 lbs/day) and the USDA Class III milk price average of \$16.17 for 2017. The range of these "dumped" milk costs varies from \$45-\$125 per cow. These "dumped" milk costs aggregate approximately \$300M per year.

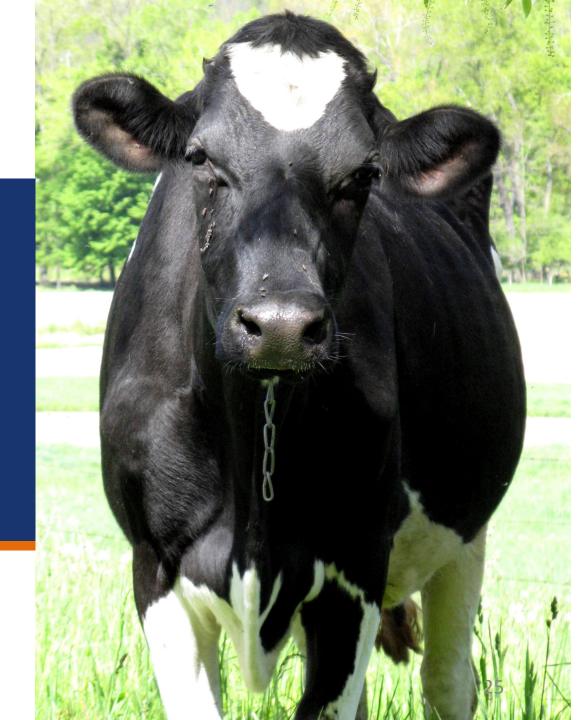

Status of NADA for Re-TainTM

We have completed 4 out of 5 NADA Technical Sections required for FDA approval

Development Item	Date Completed
1. Environmental Impact Technical Section Complete Letter from the FDA	3Q 2008
2. Target Animal Safety (TAS) Technical Section Complete Letter from the FDA	2Q 2012
3. Effectiveness Technical Section Complete Letter from the FDA	3Q 2012
 4. Human Food Safety (HFS) Technical Section Complete Letter from the FDA Zero milk discard period and zero meat withhold period granted by the FDA 	2Q 2011
Laboratory Method Transfer to detect Nisin in milk	3Q 2018 V
 5. Chemistry, Manufacturing and Controls (CMC) Technical Section First Phased Drug Substance submission to FDA Response from FDA on First Phased Drug Substance submission Second Phased Drug Substance and Drug Product submission to FDA Response from FDA on Second Phased Drug Substance and Drug Product submission 	1Q 2019 3Q 2019 By end of 2020 (anticipated) 6 months after submission
6. NADA Approval by FDA after administrative review (60 days after Technical Section Complete Letter)	2021 ⁽¹⁾ (anticipated)
7. We are investing approximately \$4 million to create our own Drug Product formulation and aspetic filling facility	2022 (post-approval)

⁽¹⁾ See current SEC filings for detailed description of events that must occur to achieve this milestone in accordance with this projected timing and some of the risks that could prevent this from happening as projected.

Section #2: Testimonials

First Defense® is like an insurance policy that pays for itself in spades. Say you cut your death loss from, conservatively, 8 to 2 percent. If you have 300 calves a month, that's 12 more calves a month or 144 calves a year more that you are able to raise. That fuels the growth of the whole dairy."

Arie Roeloffs Southfield Dairy 5,000 cows Wendell, Idaho About seven years ago, we were having a serious problem with rotavirus and coronavirus; we were losing a lot of calves. Our veterinarian recommended administering First

Defense® to newborns.

It took care of the problem and I couldn't be happier.

We've given First Defense® to every heifer calf since."

Jay Van Der Hoek Van Der Hoek Dairy 1,800 cows Modesto, California Approximately 10 years ago we had a minor flare-up of scours in our herd. Treating the calves was costly and time-consuming and it set the calves back in terms of performance. The following year we administered **First Defense**® to every newborn. Scours became basically non-existent. Now each calf receives **First Defense**® within their first few hours of life."

Brad Bader
Carrousel Farms
700 head beef operation
Monroe, Wisconsin

We began using First
Defense® during the 2013
calving season when we
were treating what seemed
like half of our calves for
scours. Since using First
Defense®, we have treated
only four calves for scours
out of our 600 head herd.
First Defense® really
works!"

Brian Marshall Marshall & Fenner Farms 600 head cow/calf beef operation Malta Bend, Missouri

Tri-Shield is the most reliable way for us to prevent calf scours and it is the only thing we

need to use.

Kazmeiro (Kazzie) Nero

Oakwood Dairy Auburn, NY

Diagnostics have shown Rotavirus has been the Cause of calf deaths in Many herds, even well Managed dairies that are Very clean. TRI-SHIELD is Our new tool of choice to Prevent rotavirus scours.

Mark Hardesty, DVM

Maria Stein Animal Clinic Maria Stein, OH

Over the years we Layered in 3 different products, trying to prevent scours, but with TRI-SHIELD we eliminated all of those, and calf health is better than ever, not often can we cut costs in half and improve, but Tri-Shield has done that for us.

Connie Soemann

Mc Collum Farms **Godport NY**

We have been using Tri-Shieldfor 2 years now and have noticed a tremendous reduction in scours. It's so easy to administer and performs every times

Sasha Rittenhouse

R Enterprises New Carlisle, OH

Our day-one protocols are Consistent and calf management top notch but we were still able to see a significant reduction in treatment costs within those first two-weeks of life.

Matt Kunde

P7 Dairy Roswell, NM

Oakwood Dairy is a 2,000 head dairy with calves raised In individual stalls within a greenhouse barn. They removed ScourGuard 4KC after seeing results with TRI-SHIELD

The Maria Stein Animal Clinic has 9 practicing veterinarians serving 45,000 dairy cows in Western Ohio and Eastern Indiana.

McCollum Farms is a 1.600 head dairy with calves in hutches outside for 9 months, hutches moved inside over winter.

R Enterprise is a beef seedstock operation Raising feed efficient, sound, functional cattle that excel in carcass quality.

P7 Dairy is a 4,300 head Holsteins operation milking 3 times a day. P7 is a progressive data driven farm. Calves are fed pasteurized colostrum administered with disposable esophageal tubes and disposable colostrum storage bags at birth. Claves are housed in hutches.

We've had a legacy of rotavirus here. We couldn't live without Tri-Shield. It's good for our calves and our employees. We have used it since it came out and won't ever stop.

Charley Hansen

4C Corporation Duchesne, UT

Tri-Shield is much easier to apply than a dam-level scour vaccine or Calf-Guard[®]. A one-step process with no waste on DOA's or cows that don't give colostrum.

Brent Wickstrom

Wickstrom Jersey Farm Hilmar, CA

We had lots of issues with our calves before Tri-Shield. Lab results confirmed we were dealing with all three pathogens (E. Coli, coronavirus, and rotavirus). Since we started Tri-Shield the calves have been doing much better, I haven't lost a calf to scours in the past 9 months

Alyssa Fischer

Darian Acres Rio, WI

Out pasteurized colostrum program is highly monitored. We routinely track bacterial count and solids. Our blood total proteins average 6.7 mg/ml. But Tri-Shield has an added effect over a quality colostrum program. Fewer calves shedding pathogens at the calf ranch protects not only our calves but all calves at the ranch.

Chris Terra

Red Top Jersey Chowchilla, CA

Tri-Shield is a highly effective and easy to deliver, without colostrum interference. I have received lots of positive feedback from my customers using Tri-Shield. I also use tri-Shield on our personal Angus herd and have had great results.

Vince Collision, DVM

Collision Veterinary Services Rockwell City, IA

4C Corporation is a 3,000 head Jersey/Holstein dairy in the high desert area of Utah.

Wickstrom Jersey Farm is a 2.000 head farm who's heifers feed into an off-site calf ranch owned by the dairies.

Darian Acres is a dairy with 30-50 calves per month. calves receive colostrum and then milk replacer, fed by bottle for two weeks, then by pail. Calves are on milk until 8 weeks old when they are weaned. They are housed in hutches.

Red top Jersey is a 4,000 head farm whose heifers feed into an off-site calf ranch owned by the dairies They have tried other scour prevention programs like ScourGuard® and Calf-Guard® in the past but have moved to only Tri-Shield.

Collison Veterinary Services provides Veterinary and Embryo services.

...simple to administer and produces results

"Prior to adding First Defense® to our regimen, our calves would always run into problems with salmonella after having scours seven to 10 days after birth. We have been using First Defense® at Cal Poly State University's dairy unit and have seen calves getting through the first two weeks of life stage really successfully. We would recommend First Defense to anyone. This product is simple to administer and produces results.:

-Rich Silacci, Cal Poly State University, San Luis Obispo. CA

...a huge return

"We have been using First Defense® for the last 3-4 years and are really happy with the product. For us it's important, it's a big investment and a huge return. The product is convenient and versatile. Knowing we have protection as soon as the calf hits the ground is satisfying and comforting. This product gives assurance."

-Dan Kullot, DVM, Syracuse Diary, Syracuse, KS

...we went from 40% scour down to 15%

"The first two weeks of life are very important because that affects her milk production for the rest of her life. And we've made a change in the last 30 days and we went from 40% scour incidences down to about 15% scour incidences. But then I've also used First Defense® on other dairies and it worked phenomenal for me too."

-Danny Cundiff, G2 Producers, Dumas, TX

...give to the calf as soon as it's born

"The thing that I like about First Defense® is that you give to the calf as soon as it's born. There are some products on the market today that you have to give to the calf at birth and the recommendation is to wait 30 minutes or longer before you can feed colostrum. It's so hard to tell a dairyman or a calf raiser to delay feeding colostrum when that's the most important thing to give the calf."

-Steve Hayes, DVM, Day 1 Technology, Winona MN

...we noticed a big difference in milk and grain intake

"You can just compare calves that you have on First Defense® compared to calves that aren't. There's definitely a big difference. Maybe not day one, but as they're in their first three weeks when they're in the calf hutches and they're on milk. Once they start grain, we noticed a big difference on their milk and grain intakes, as well as just being healthier all around.

-Zach Damrow, Deagull Bay Dairy, American Falls, ID

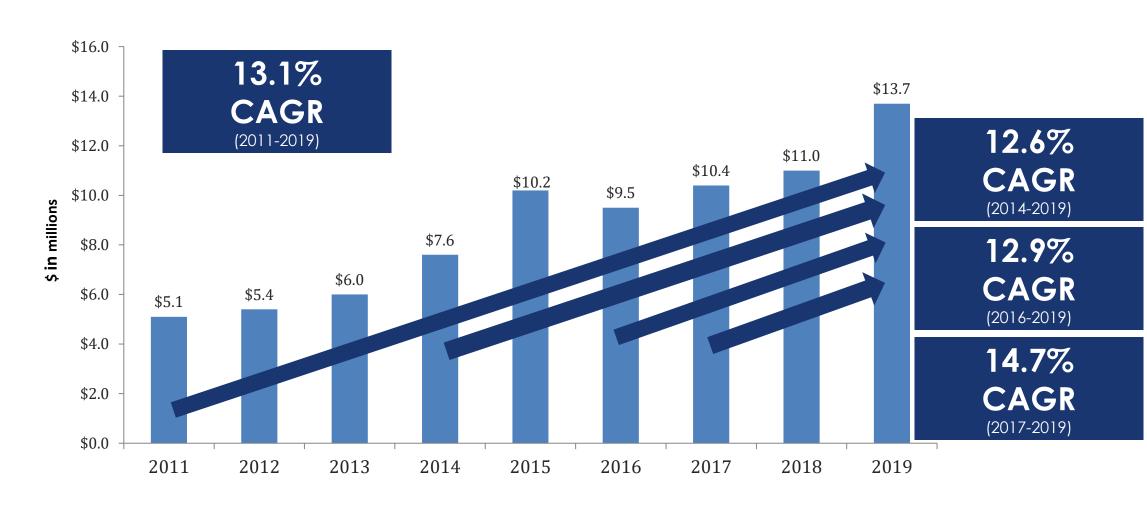

...dropped our scours rate by about 75%

"We did a trial and found that First Defense® as well as a different colostrum pasteurizer dropped our scours rate by about 75%."

-Katie Grinstead, Vir-Clar Farms, Fond du Lac, WI

Non-GAAP Measures

(in thousands)	2016	2017	2018	2019
Income (loss) before income taxes(1)	\$758	(\$438)	(\$1,860)	(\$1,267)
Depreciation, amortization and stock-based compensation	878	1,119	1,882	2,597
Income before income taxes ⁽¹⁾ and certain non-cash expenses ⁽²⁾	\$1,636	\$681	\$22	\$1,330

- (1) The Company has federal net operating loss carryforwards worth approximately \$11,950,000 as of December 31, 2019.
- (2) This figure was \$598,000 and \$809,000 during the three-month periods ended March 31, 2020 and 2019, respectively.

Generally, a non-GAAP financial measure is a numerical measure of a company's performance, financial position or cash flow that either excludes or includes amounts that are not normally excluded or included in the most directly comparable measure calculated and presented in accordance with GAAP. A reader should review our statements of cash flows for a detailed understanding of our sources and uses of cash. The non-GAAP measures included in this presentation should be considered in addition to, and not as a substitute for or superior to, the comparable measure prepared in accordance with GAAP. We believe that considering the non-GAAP income before income taxes and certain non-cash expenses assists management and investors by looking at our performance across reporting periods on a consistent basis excluding certain charges (that are not uses of cash) from our reported income (loss) before income taxes. We start with our reported income (loss) before income taxes because presently we are not paying cash for income taxes and do not anticipate paying cash for income taxes in the near-term future. We calculate non-GAAP income before income taxes and certain non-cash expenses as indicated in the table above.

Income Statement

(\$ in millions, except percentages and per share amounts)	2016	2017	2018	2019

Total	\$914	\$2,250	\$21,640	\$279	\$538	\$1,865	\$27,486	

PROJECT A is a 7,100 square foot facility addition at 56 Evergreen Drive. An additional \$1,041,000 was paid for this addition during the year ended December 31, 2014 to bring the total cost of Project A to \$1,955,000. This investment also included the construction and equipping of a pilot plant for small-scale Drug Substance production facility for **Re-TainTM** within our **First Defense**® production facility that is now used to produce the gel tube formats of the **First Defense**® product line. **PROJECT B** is an investment to increase the production facility for **Re-TainTM**. This investment includes \$20.8 million for the Drug Substance production facility and related processing equipment plus \$331,000 for the land and \$472,000 for the acquisition of an adjacent 4,100 square foot warehouse facility. **PROJECT D** consists of renovations to a 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary production equipment to expand the production capacity (in terms of annual sales 14,300 square foot leased facility and necessary producti

dollars) for the **First Defense**® product line from approximately \$18 million to approximately \$27 million. The original budget for this project of \$3 million has been expanded to \$3.5 million to include additional cold storage space and other benefits.

PROJECT E is the investment to bring the formulation and aseptic filling services for Re-TainTM Drug Product in-house. The full budget for this project is \$4 million. **PROJECT** F represents other miscellaneous capital investments during the years.

First Defense® Product Line

- The First Defense® product line is the only USDA-licensed, orally delivered scours preventative with claims against *E. coli*, coronavirus and rotavirus.
- Colostrum (first milk) consumption immediately after birth provides critically important antibodies before the immune system matures to produce its own antibodies. Our hyperimmunization program and the use of bovine colostrum makes our product unique.
- Three primary formats:
 - 1) The original (approved in 1991) **Dual-Force First Defense**® in a bolus
 - 2) The new (approved 4Q 2017) Tri-Shield First Defense® in a gel tube
 - 3) The newest (approved 4Q 2018) **Dual-Force First Defense**® in a gel tube
- The First Defense® product line provides Immediate Immunity™ to newborn calves.
- Verified antibodies are more progressive and protective than a variable vaccine response.

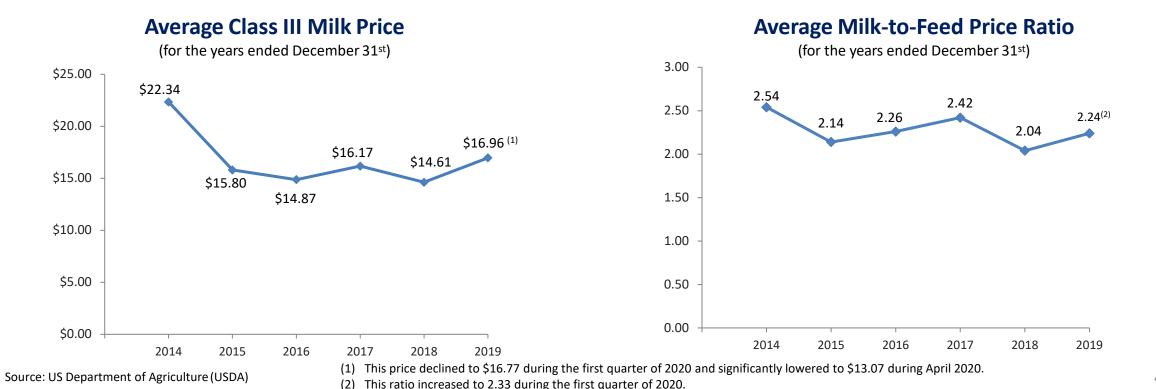

First Defense® Product Line (continued)

- More than 23 million doses sold in aggregate (as of 2Q 2019)
- Annual gross margin consistently near 50% since 2007
- With the addition of rotavirus claim, we provide a unique breadth of protection against three leading pathogens
- Improved competitive position against calf-level products
- Now able to compete more effectively against dam-level scours vaccine products
- Producers can save needles and labor for vaccines that are more critical to cow health
- Invest in viable calves only
- We are investing about \$3.5 million to increase annual production capacity from approximately \$18 million to around \$27 million

Economics of Dairy Industry

- Milk price improved during 2014, but this positive trend did not continue during 2015 or 2016. The price for 2017 was 9% higher than the 2016 average. The price for 2019 was 16% higher than the 2018 average.
- The Milk-to-Feed Ratio has not returned to the recent high level reached in 2014.

Cattle Market Overview

ImmuCell's products are currently focused on the North American dairy and beef cattle markets, although significant market opportunities exist in other international territories.

Number of Dairy & Beef Cows (in thousands)

Markets currently served:	Dairy	Beef	Total
United States	9,330	31,789	41,119
Canada	<u>970</u>	<u>3,670</u>	<u>4,640</u>
North America	10,300	35,459	45,759
South Korea	315	1,385	1,700
Japan	<u>855</u>	<u>615</u>	<u>1,470</u>
Subtotal	11,470	37,459	48,929
Market opportunities for growth:			
Iran	14,000	53,400	67,400
Jordan	23,250	12,200	35,450

What is **Scours**?

- The disease manifests as rampant, uncontrolled diarrhea in newborn calves.
- Scours is the leading calf disease risk. We estimate the cost to the U.S. dairy and beef industries to be approximately \$741 million. (1)
- Percent of pre-weaned heifer deaths caused by scours or other digestive problems:

57%(2)

• **Incidence rate** of scours in live births:

23%(3)

- Scours is an economic drain in three ways:
 - 1. Calf losses (death)
 - Treatment costs (antibiotics, rehydration fluids, and increased labor/nursing back to health)
 - 3. Reduced productivity (less growth and milk production)

⁽¹⁾ See next slide (#42) for detailed, estimated calculations.

2,250,000

\$74,970,000

\$ 17.82

Pounds less milk produced per lactation

Calves treated for scours

Cost in cwt (1 cwt = 100lb) (price @ December 2014)

Cost to dairy industry in reduced milk production

Beef Calf Deaths				
Deaths prior to weaning	6.4%			
% of above deaths from scours	14.2%			
Number of calves	28,000,000			
Wet calf value (increases towards \$1,000 with age)	\$300			
Cost to beef industry due to scours deaths	\$76,339,200			
Scours Treatments				
Live calves treated for scours	20.0%			
Number of calves	28,000,000			
Treatment costs (labor, antibiotics, fluids)	\$20			
Cost to beef industry due to scours treatment	\$112,000,000			
Reduced Weight Gain				
Pounds lighter at weaning	20			
Price per pound	\$2.00			
Calves treated for scours	5,600,000			
Cost to beef industry in reduced weight gain	\$224,000,000			

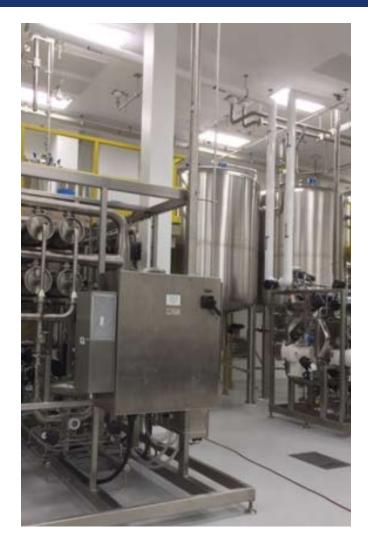

The data used to compile the estimated cost of calf scours to the dairy and beef industries was derived from our best interpretation of industry reports and understandings with reference to, but not limited to, the following published sources:

- •2007-2008 USDA National Animal Health Monitoring System (NAHMS) Report on Beef Cow-Calf Health and Management,
- •USDA Dairy 2007 NAHMS Report on Heifer Calf Health and Management,
- Progressive Dairyman, May 2014, What is scours costing your operation?
- •Drovers CattleNetwork, March 2014, Optimizing Calf Health, and
- •Economics of Scours, beef worksheet, Pfizer Animal Health.

While ImmuCell believes the figures presented are reasonable for the purpose of this discussion, the actual cost of scours could vary greatly from the estimated figures presented

Pharmaceutical-grade Nisin Drug Substance Facility

- Construction of a commercial-scale Nisin Drug Substance facility (in Portland, ME) was initiated 3Q 2016 and completed 4Q 2017.
- Equipment installation was completed in 3Q 2018.
- Cost for this project was approximately \$20.8 million.
- Registration batches completed 4Q 2018.
- FDA site inspection initiated during 3Q
 2019. Full response submitted 1Q 2020.

Relevant Regulatory Initiatives

- -2011: Dutch Veterinary Society restricts the use of beta lactams in cattle
- -2012: FDA further restricts the use of cephalosporins in food animals
- -2017: Veterinary Feed Directive (VFD) restricts the use of medically important antibiotics
- -2018: FDA announced 5-year plan for Antimicrobial Stewardship in Veterinary Settings, eliminating production uses of medically important antimicrobials and bringing all therapeutic uses under the oversight of licensed veterinarians

Executive Management Team

Michael F. Brigham President and Chief Executive Officer, Director

- Appointed as President and Chief Executive Officer in February 2000
- Director since 1999
- Audit Manager at Ernst & Young prior to joining ICCC

ImmuCell

Bobbi Jo Brockmann Vice President of Sales and Marketing, Director

- Joined ICCC in January 2010
- Promoted to VP of Sales and Marketing in February 2015
- Director since 2017
- Previously with APC Inc., W&G Marketing Company Inc.

Joseph H. Crabb, Ph.D. Vice President and Chief Scientific Officer

- Joined ICCC in November 1988
- Appointed as Chief Scientific Officer in September 1998
- Doctorate and postdoctoral studies at the medical schools of Dartmouth and Harvard, respectively

Elizabeth L. Williams Vice President of Manufacturing Operations

- Joined ICCC in April 2016
- Previously led U.S. region for Zoetis as VP Global Manufacturing and Supply and held Site Leader positions at Pfizer Animal Health Facilities

Board of Directors (outside directors)

David S. Cunningham Director

- Director since 2011
- Bimeda, Axxiom Consulting, Teva Animal Health and Agri Laboratories,

Steven T. Rosgen Director

- Member of the Audit Committee
- Director since 2018
- Strategem Research Inc., Street Smart Strategic Planning

Jonathan E. Rothschild Director

- Member of the Audit Committee and the Compensation and Stock Option Committee
- Director since 2001
- · Arterio Inc., CCA Industries, Inc.

Stratagem

David S. Tomsche, D.V.M. Chair of the Board

- Appointed to Chair of the Board in February 2013
- Director since 2006
- Leedstone Inc., J-t Enterprises of Melrose, VetPharm Inc.

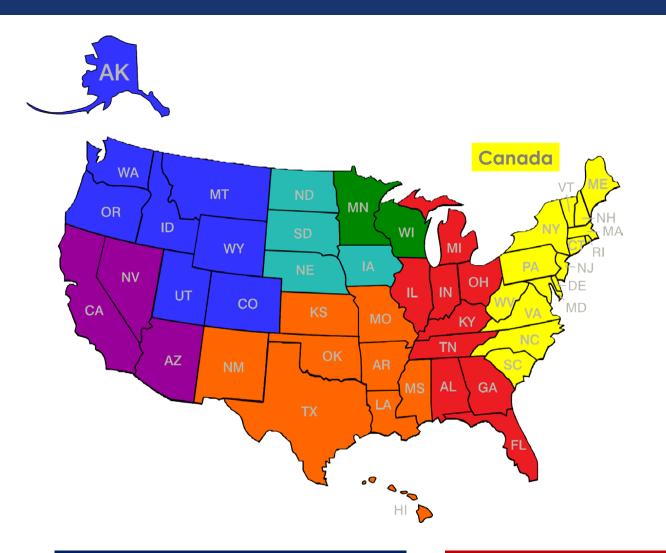

Paul R. Wainman Director

- Member of the Audit Committee and Nominating Committee
- Director since 2014
- · Hancock Lumber, Kleinfeld Paper, William Arthur Inc.
