Coda Octopus Group, founded in 1994, is an established supplier to the Underwater/Subsea market. It supplies a range of hardware and software solutions to this market which includes key proprietary real time 4D/5D/6D imaging sonars, marketed under the name Echoscope® and Echoscope PIPE® addressing the underwater imaging sensor market along with new generation diving technology, Diver Augmented Vision Display (DAVD) system. The Company's Echoscope PIPE® sonar generates real-time 3D/4D/5D images of moving objects underwater including in zero visibility water conditions. The Echoscope® technology is used globally for numerous applications in both the commercial offshore market and defense underwater markets. Applications for the Echoscope® technology include complex mapping underwater, subsea intervention, subsea asset placements, salvage and recovery, search and rescue, offshore renewables cable installations and surveys, marine construction, subsea infrastructure installation, mining applications, robotics (3D Perception and Depth), breakwater construction and monitoring, decommissioning, diving applications and port and harbor security. The recently launched new generation of diving technology, DAVD, has the potential to change the way global diving operations are performed (both in the Defense and Commercial space) because it is a fully integrated singular system for topside control and fully connected diver HUD system, allowing both the topside and diver to share a range of critical information and visualize the same underwater scene.
